

Babawale Victor Ayomide

Embedded Systems Engineer

+234 808-606-2579 | victorbabawale65@gmail.com

Work Experience

Autokontrol Technology

Aug 2025 – Till Date

Embedded System Engineer

- Assisted in optimizing firmware and microcontroller architectures for industrial control units, improving system processing speed.
- Drafted and implemented embedded software testing and debugging protocols, reducing code defects and signal inconsistencies.
- Supported the creation of detailed technical documentation, hardware schematics, and project reports for engineering stakeholders.

Lagos State Development & Property Corporation

Mar 2025 – Aug 2025

Network Engineering Intern

- Assisted in the management of local area networks (LAN) and wide area networks (WAN), supporting seamless operations for enterprise end-users.
- Collaborated with cross-functional IT teams to audit hardware assets, map active network ports, and streamline infrastructure documentation.
- Executed physical cable installation, testing, and labeling (Cat6/Fiber) in compliance with telecommunications standards.

Autokontrol Technology

Mar 2024 – Mar 2025

Solar Installation Engineer Intern

- Executed physical array setups and electrical wiring for photovoltaic panels, increasing total system energy capture across active client sites.
- Evaluated inverter performance metrics and solar array output data to optimize clean energy production and system reliability.
- Partnered with field engineers to design and assemble custom racking models and cable management systems for specialized roof structures.

Education

University of Ilorin, Nigeria

2021 – 2026

Bachelor of Engineering, Computer Engineering

Relevant Coursework: Microcontroller System Architecture & Interfacing; Computer Organization & Architecture; Embedded C / C++ Programming; Embedded Software Testing & Verification

Leadership

Christ Apostolic Church Students Association, University of Ilorin

2025 – 2026

Vice President

- Served as Vice President of a student association representing and coordinating a community of over 400 students.
- Supported the planning, coordination, and execution of association programs, ensuring effective communication and participation across the student community.
- Worked with executive members and program coordinators to organize student activities, allocate responsibilities, and ensure smooth execution of events and initiatives.
- Provided leadership and direction to student members, fostering collaboration, accountability, and active participation in organizational activities.

Christ Apostolic Church Students Association, University of Ilorin

2023 – 2025

Programs Coordinator

- Led the planning and coordination of programs for a community of over 400 students, organizing activities and ensuring effective participation across the association.

- Developed and coordinated program schedules, communicated activities to members, and worked with team members to ensure timely and successful execution of events.
- Organized students into teams and delegated responsibilities to support the efficient planning and delivery of association programs and activities.
- Coordinated volunteers and student leaders, monitored assigned responsibilities, and resolved operational challenges during program execution.
- Collaborated with the association’s executive team to develop engaging student programs and initiatives that encouraged participation, teamwork, and community building.

Projects

Password Controlled Lock

- Designed and built an embedded security system featuring a key-based keypad input interface and an LCD display for real-time user feedback.
- Integrated hardware components with proper signal conditioning and debouncing.
- Developed firmware in C/C++ to process user input, compare security codes against stored values, and actuate the electronic locking mechanism.

Mini Smart Grid

- Architected an IoT-enabled smart mini-grid system with dual telemetry interfaces, leveraging a localized GLCD and a remote web dashboard for real-time monitoring and user feedback.
- Engineered robust hardware-to-microcontroller interfaces using opto-isolated relay drivers and custom DC-DC voltage regulation to ensure safety when switching high-power loads.
- Programmed C/C++ firmware on FreeRTOS to handle multi-phase power analytics, continuously evaluating real-time demand against safety thresholds to execute dynamic load shedding across independent phase relays.

Skills

Technical Skills	Data Analysis; Embedded Systems; Solar Installation
Soft Skills	Communication; Leadership; Attention to Detail; Teamwork
